

9 Lives

Level 1 — Foundations of Movement

This level introduces the core platforming mechanics the player will rely on throughout the game.

- **Jump Over Traps:** Basic jump mechanics let the player clear spike traps and other ground-level hazards.
- **Wall Shrink/Expand:** Walls that periodically shrink and expand force the player to read patterns and time their movement through shifting gaps, adding a puzzle-platforming layer.
- **Disappearing Floor:** Floor tiles that vanish and reappear on a cycle.
- **Laser Dodge and Crouch:** Horizontal or vertical lasers require the player to crouch at the right moment.
- **Game Pause on/off, pov change, and others**

Level 2 — Combat and Abilities

This level shifts focus from pure platforming to combat, introducing the player's core arsenal.

- **Pick Up Gun / Shoot Enemies:** The player gains a ranged weapon, introducing basic combat mechanics like aiming, shooting and enemy health/damage systems.
- **Switch between gun/catnip :** The player switches between catnip and gun when F is pressed.

Level 3 — Mastery and Boss Mechanics

The final level ties earlier mechanics together and introduces unique boss-fight interactions.

- **Destroy Cat Shield:** A defensive barrier of the final boss (Larry) that must be broken down before further damage can be dealt and after the shield is broken, small Larrys will be gone.
- **Light Pillar Destroy When Meow (Ears Red):** A signature ability of the boss: meowing charges up and turns the cat's ears red, allowing small pillars to be destroyed.

- **Throw Catnip at Small Larry:** Catnip is equipped as an alternate gun mode, which can be used when pressing a key from the keyboard and would be used in level 3 to subdue small Larry and fight as our ally.
- **Speed Boost:** A mobility upgrade, used to close distance on the boss and will be helpful to defeat the final boss after the shield is broken.
- Boss power
